

Abstract

A machine controlled by a computer for depositing a liquefied
 electronically-interactive material on a sheet or support card,~~which~~
 includes: a base (1) to support ~~a the~~ mobile bed (2) which is moved
 5 longitudinally (Y) by ~~means of~~ a worm screw (20) whose movement is
 controlled by a computer; and which supports for the support and fixes
~~fixing of the said~~ support sheet or card "S" on which the layer of
 electronically-interactive material is to be formed; ~~a. A~~ bridge above the
~~said base~~ has with a transversal shaft (30) which also has a worm screw and
 10 whose movement is also controlled by the ~~said~~ computer, ~~in which the. The~~
 transversal shaft (30) moves the ~~said~~ distribution unit for the electronically-
 interactive material to be deposited (3) in an orthogonal direction (X).
